

Design Rationale - Team 67

Project Title: Photoshop 2030: The Intent-First Mobile Editor of 2030

Vision: Interaction Over Layout

Moving beyond the static layouts of 2025, Photoshop 2030 reimagines the editor as a two-way conversation. The Home Screen interaction flows are a strong testament to that very vision of ours. We embrace the industry shift toward Hyper-Realism with a Liquid Glass-like UI, creating a tactile, immersive environment where the interface feels alive, not just a container for buttons.

Radical Simplification: The Floating Capsule

Current editors overwhelm users with cluttered toolbars. We aggressively reduced cognitive load by condensing the entry point into a Floating Liquid Capsule with only four decisive options:

1. **Select (Unified Module):** We streamlined fragmented tools (Heal, Patch, Move) into one linear workflow. The user simply Selects, then chooses the Intent (Erase, Move, or Inpaint). No scattered journeys; just results.
2. **Prompt:** A button-free, direct-to-result conversational interface for pure generative creation.
3. **Edit:** Legacy manual tools are tucked away here, prioritizing AI assistance over manual pixel pushing.
4. **Layers:** Essential for non-destructive professional control.

The "Orby" Assistant & Context Awareness

Guiding this experience is Orby, an emotive, always-active AI navigator. Orby shifts the app from "passive tool" to "proactive partner," offering context-aware suggestions based on the intent defined by user (like "Remove Tourists" or "Fix Lighting") via gaze-based animations and touch interactions.

Hybrid Compute & Ethics

To respect the given constraint, a transparent Model Toggle empowers users to choose between Atom (Local/Privacy-First) and Klyra (Cloud/High-Fidelity). Finally, we integrate C2PA Content Credentials at export, ensuring ethical provenance for every AI-generated layer.

One-Click Generative Shortcuts

For maximum speed, core generative functionalities like **Stylize (A→A')** and **Auto-Enhance** are clustered in the editor's top navigation, providing immediate, one-tap access to powerful generative tools.
